

Recycling Tips

Keep your recyclables out of plastic bags

The machines that sort your recycling cannot sort recyclables in plastic bags. Workers help to hand sort your recyclables and materials presented in plastic bags may present dangers workers. All bagged recyclables are considered contamination and cannot be recycled.

Leave the lids on, no need to remove

Recyclables in the south west of Victoria are processed at a materials recovery facility where lids can be left on – including spray tops, pump tops, plastic carton lids, drinks lids and glass jar lids.

Empty your containers, no need to rinse

Empty your containers of any remaining scraps or leftover contents. The container does not have to be completely clean and you do not need to rinse it out.

Leave the labels on

Remove all remaining food and liquid from containers before placing in your recycling bin – no need to take off the label.

You can recycle plastics that do not have a recycling code

The triangle with a number from 1 to 7 is a plastic identification code for manufacturers and is not a recycling code. If a plastic item doesn't have a number but is included in the items listed for recycling on this leaflet then it can be recycled through the kerbside recycling collection.

Remember to recycle from every room

Think beyond the kitchen when recycling and recycle from the laundry, bathroom, study and lounge room.

Place your bin out correctly

Put your bin out with wheels facing the property and close the lid.

Further information

If you would like further information about how you can Get it Right on Bin Night contact your local council.

This publication is brought to you by the Waste Reduction Group and its member councils.

Get it Right on Bin Night

Victorians are great recyclers, but there is more that we can recycle. Almost 20% of the contents of our household rubbish bins can be recycled. Get it Right on Bin Night – check what you can recycle.
